Senior UI/Angular Developer

Description

ShiftX mission is to make scheduling simple and create an outstanding employee experience. We are taking a radical approach to workforce management. With unprecedented products and tools, we're not just revolutionizing the way our clients manage scheduling, we're transforming the way their employees experience scheduling. Whether our clients are looking to increase employee satisfaction, reduce operating costs, or revamp their employee management systems, ShiftX provides the platform to change the way they manage their workforce.

Are you interested in SHIFTing the conventional thinking in scheduling to create a disruptive platform that combines artificial intelligence capabilities with an innovative, user centric design?

- We are looking for a product-focused engineer who cares about excellence in what they deliver.
- We are a company where autonomy, creativity, thoughtfulness, and trust are valued, and opportunities to grow are limited only by your imagination.
- This role is not for the unseasoned. We need a coder and a leader, who has an appreciation for good design and usability.

The technical problems we solve aren't simple, but this means you'll be able to do work that matters and help a ton of people in a way you've never imagined.

Qualifications

- 1 to 5+ years of hands on current development experience in both AngularJS and Angular
- Very strong in HTML, Bootstrap, CSS, LESS or SASS
- Ability to write code using Typescript or ES6
- Strong knowledge in Grunt or webpack, Node.js, Babel
- Strong knowledge UI unit testing/mock frameworks such as Batarang, Karma, Jasmine
- Resolved cross-browser issues and fluent with addressing with techniques like polyfill
- Ability to develop selenium scripts
- Develop reusable components, factories, services, directives
- Deep understanding about developing mobile responsive UI
- Understanding on UI/UX Design principles
- Integrate front-end application with the application business layer in MVC architecture
- Ability to create custom widgets based on specifications
- Follow best practices and standards for accessibility and cross-browser compatibility
- Create conceptual diagrams, visual mock-ups, and manage detailed user interface specifications
